# Advanced Air Filtration for Commercial and Industrial Spaces

## Air Purification Solutions for Healthy Environments

The AF2000 industrial air purifier has proved to be one of the most effective solutions against a wide range of airborne chemicals and odors, including exhaust gases, paints, lacquers, cleaning supplies, pesticides, building materials and furnishings, office equipment, glues, adhesives, disinfectants and many more.

Engineered to handle high concentrations of chemical pollutants, the AF2000 provides maximum protection for commercial and industrial spaces and reduces gas phase contaminants to below OSHA's TLV levels.

Built to meet the regulations for ventilations rates for spaces up to 1200 ft<sup>2</sup>, the AF2000 is equipped with high quality blower motors which guarantee a very high volumetric flow rate.

The AF2000 is a highly customizable unit, capable to eliminate a huge variety of pollutants. By using various combinations of filters and 26 different chemical filtration media, the AF2000 is the tool of choice against high concentrations of aldehydes, alcohols, acids, VOCs, fluorinated hydrocarbons, chlorinated hydrocarbons, alkenes and alkanes, acetates and many other chemical groups.

### SPECIFICATIONS

- Dimensions: 71"H x 24"W x 26"D, 350 lbs
- Airflow (CFM): 1000 nominal; adjustable intake grills
- HEPA filter: 99.97% of particles down to 0.3 micron; available in certain configurations
- Chemical filter: up to 200 lbs; 26 blends available
- UV Light: Available in certain configurations
- Power: 120V, 60Hz, 4A
- Sound levels: < 54dba at low speed
- Cabinet: Heavy Gauge Welded Steel
- Options: high air flow configurations; collars for ducting
